HARSHAVARDHAN S

AI Product Engineer | Senior Frontend Engineer

Bangalore, India

shv.harshan68@gmail.com | 9655446905 | Github | LinkedIn

SUMMARY

AI Product Engineer / Senior Frontend Engineer with 6+ years of experience building scalable web applications using React, Next.js, TypeScript, and JavaScript. Experienced in building GenAI-powered products using LLMs, prompt engineering, and AI integrations, with hands-on expertise in frontend architecture, performance optimization, and real-time applications. Currently working as a Full Stack Engineer on a GenAI product for the US healthcare domain, with experience in AI model selection, prompt optimization, AI safeguards, and cost optimization. Proven track record of building reusable component libraries, making architecture and state-management decisions, optimizing production performance, and mentoring engineers.

TECHNICAL SKILLS

Frontend: React.js, Next.js 15 (App Router, Server Components, SSR/ISR, Middleware), TypeScript, JavaScript (ES6+), HTML5, CSS3

Generative AI: LLM-based application development, prompt engineering, AI-assisted workflows

Architecture & Systems: Frontend architecture ownership, state management strategy, reusable component library design

Performance Engineering: Bundle analysis, re-render profiling, Core Web Vitals, code-splitting, rendering optimization

State Management: Redux, Zustand, React Query / TanStack Query, Context API

AI-Native Development: Cursor, Claude Code, GitHub Copilot, Claude for code generation, refactoring, review, and test generation

UI & Styling: Tailwind CSS, Shadcn/UI, Bootstrap, Material UI, AntDesign, Radix UI

Testing: Jest, Playwright

Full-Stack: Node.js, ExpressJs (basics), REST API, GraphQL, PostgreSQL (recently learned), Flutter (mobile)

Other: WebSocket, AWS (S3), Vercel, Git, GitHub Actions, JIRA, Agile/Scrum

WORK EXPERIENCE

Full Stack Engineer (Gen AI) | Finnastra Private Limited [contract] — Sep 2026 - Present

- Building GenAI-powered features for a US healthcare revenue cycle management product
- Writing and improving LLM prompts and testing them against real documents to make the results more accurate and reliable
- Adding safeguards around AI output and patient data privacy
- Took end to end ownership and made cost optimization decisions on choosing the Ai models, stack and other architectural decisions.
- Optimized prompt architecture to maximize OpenAI's automatic prompt caching, reducing token consumption and enabling 30% more effective API usage

Technologies: *React.js, Next.js, TypeScript, PostgreSQL, Generative AI (LLMs), Prompt Engineering, supabase*

Frontend Engineer | Loch — Jan 2026 - May 2026

- Owned the frontend architecture for a real-time arbitrage detection engine from start to finish, made the calls on rendering and state management myself, and integrated REST APIs from Polymarket and Kalshi exchanges
- Grew user engagement by 30% with a responsive, mobile-first UI built using React.js, Next.js Server Components, and SSR/ISR
- Built a portfolio management dashboard with real-time profit and loss (P&L) tracking and position management
- Built a reusable React component library from the ground up, including data tables, charts, filters, and layouts, that other engineers on the team built their work on top of
- Handled state management using Redux, Zustand, and React Query to keep the app fast and predictable
- Built WebSocket services for live price feeds, order book data, and real-time trade execution
- Used Cursor and Claude Code every day to write components, refactor code, and ship features, always reading and checking the output myself before merging anything

Technologies: *React.js, Next.js, TypeScript, JavaScript, Redux, Tailwind CSS, Zustand, React Query, WebSocket, REST API, Web3, Blockchain, Git, Vercel*

Senior Software Engineer | Fyers Securities
May 2022 - Dec 2025

- Revamped a trading platform's charting module using vanilla JavaScript, using bundle analysis and re-render profiling to find the actual bottlenecks and improving rendering time by 20%
- Integrated the TradingView SDK for 500,000+ users
- Simplified the candle-generation logic, cutting code complexity by 40%
- Handled Next.js deployments on Vercel, including build configs and release rollouts
- Worked with Product Owners and Architects to scope out and estimate user stories during Agile sprints
- Worked closely with QA to make sure every user story was properly tested
- Investigated and fixed production issues reported by customers
- Mentored junior team members through code reviews and one-on-one coaching, helping them become 25% more productive
- Reviewed 100+ PRs, keeping a 95% first-time approval rate by holding the line on code quality
- Built and maintained internal React applications for the company
- Cut page load times and bundle size by 35% through code-splitting

Technologies: *React.js, Next.js, JavaScript, Redux, Vanilla JS, TradingView SDK, WebSocket, REST API, Vercel, Git, Agile, JIRA, Performance Optimization*

Senior Systems Engineer, Infosys Limited | Bank of America, Infosys Limited
Jan 2020 - May 2022

- Contributed to ASP.NET to React.js migration of Bank of America's trading platform, building portfolio pages, holdings views, and UI components
- Collaborated in an Agile team of 8+ engineers alongside Scrum Masters and Product Owners, consistently delivering sprint goals on time with a Tier-1 investment bank

Technologies: *React.js, JavaScript, Redux, ASP.NET, REST API, HTML5, CSS3, Git, Agile, JIRA*

EDUCATION

Bachelor of Mechanical Engineering **2015 - 2019**
Sastra Deemed University, 81.43%
